

Single SIM for Law Enforcement Security and Pole Cameras

Always-on Network Connectivity to Enhance Surveillance Reliability and Efficiency

Many law enforcement agencies rely on security and pole cameras for surveillance and investigations in high crime areas. These cameras need consistent and reliable connectivity, seamless data transmission, and secure management.

The First Single SIM that Roams for the Strongest Network

The MetTel Single SIM is a unique connectivity solution that offers law enforcement agencies several advantages over using One-SIM, Dual-SIM, and Mi-Fi devices. With agreements with multiple carriers across the country, MetTel's Single SIM intelligently roams to find the best mobile signal in any location, ensuring reliable, always-on connectivity around the country. Law enforcement and first responder teams leverage MetTel's Single SIM for their critical communications, as well as to provide real-time data on emergency vehicles and equipment, such as security and pole cameras.

By leveraging MetTel Single SIM for surveillance cameras, law enforcement agencies achieve enhanced surveillance, quicker response times, more reliable data, and improved crime prevention. Pole cameras become powerful tools in the mission to maintain public safety and protect communities.

Benefits

ALWAYS-ON CONNECTIVITY

MetTel's Single SIM ensures that security and pole cameras maintain continuous connectivity by finding the best mobile signal. If one network goes down or has limited connectivity, the Single SIM roams across networks, automatically connecting to the strongest mobile signal.

ANYWHERE CONNECTIVITY

All cameras stay connected with MetTel's Single SIM, regardless of their location. Whether monitoring a busy street corner or a remote alley, the cameras stay online.

IMPROVED SECURITY

MetTel's Single SIM requires two-pronged device verification at both the IP and signaling levels. This added security ensures that sensitive surveillance data remains protected.

GLOBAL REACH

With connectivity through 650+ carriers in over 165 countries, law enforcement can deploy security and pole cameras globally. One SIM card covers all locations, eliminating worries about changing carriers or roaming fees. Agencies can track and report from any device, anywhere, supporting their efforts to combat crime on an international scale.

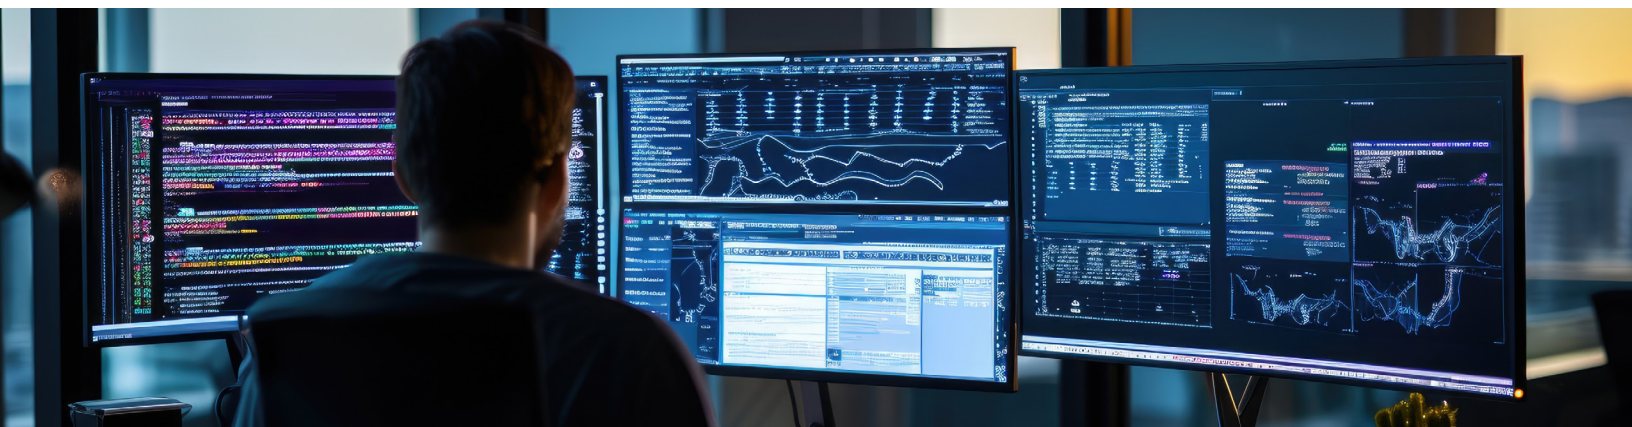

Real-time Insights and Centralized Management

MetTel's Single SIM provides real-time data on camera performance. From monitoring license plates to capturing suspect movements, law enforcement gains valuable insights in real time. The SIM archives the previous 48 hours of data and even supports geofencing, allowing self-reporting when the camera enters specific assigned locations.

MetTel's management platform allows officers to monitor and manage all devices and SIMs from a single interface, and from anywhere.

Cost-effective Solution

The efficiency of using a single SIM card and working with one vendor reduces mobility costs across the board, as connectivity isn't tied to a specific device, carrier, or location.
