

Line of Sight Broadband

Reliable internet service where regular broadband isn't available.

Line of Sight provides highly reliable and fast internet to remote sites where cable, DSL and fiber are not readily available. Line of Sight Broadband lets your company obtain 100% site coverage by delivering bandwidth to hard-to-reach locations.

Key Benefits

WEATHER PROOF

Unlike satellite, which travels 23,000 miles through the atmosphere, terrestrial only travels a few miles. And, properly engineered networks are built to withstand weather fluctuations, with little to no effect from torrential rains, snow, fog and precipitation.

SECURE

Line of Sight Broadband is not Wi-Fi. Although the technologies are similar, Line of Sight services are much more secure than Wi-Fi with AES encryption, where available.

FAST

Line of Sight is faster than cellular with bandwidth speeds ranging from 3 MB/1 MB to 25 MB/5 MB. It's more bandwidth for less cost than a T1. And, unlike mobile data plans, services are never metered with unlimited usage.

QUICK & EASY INSTALLATION

Line of Sight can be installed in as little as 30 days. There is no digging nor hardwire connections so there will be no business disruption during the installation process.

Options

POINT-TO-MULTI-POINT

- Comparable to cable and DSL
- 1 Mbps to 25 Mbps download/upload
- Asymmetrical
- Non-dedicated throughput

POINT-TO-POINT

- Comparable to fiber ethernet
- 10 Mbps to 10 Gbps download/upload
- Symmetrical
- Dedicated throughput
