**MetTel**

IoT Single SIM

The first Single SIM that roams for the strongest network globally.

MetTel's IoT Single SIM intelligently roams to find the best mobile signal in any location, ensuring the best possible connectivity around the world. With over 650+ carriers and roaming agreements in 165+ countries, MetTel now provides a simple and easy global, multi-network solution. IoT Single SIM is a truly global roaming solution that eliminates possible points of failure.

Key Benefits

- Best practice asset tracking and inventory management
- Single SIM roaming intelligent virtual network creates the best possible connectivity around the globe
- One SIM improves security compared to using multiple SIMs
- Track and report on any electronic device, anywhere, anytime
- Significant cost savings based on one globally integrated, managed solution
