SIP Trunking

Get the flexibility you never thought possible.

MetTel's solution offers the flexibility, functionality, and features of VoIP delivered to your business using SIP Trunking. Our solution enables IP PBX to run voice over your company's data network, allowing you to replace expensive phone lines and PRIs.

Key Benefits

SAVINGS OPTIMIZATION

Purchase only the trunks you need based on the maximum number of concurrent calls your business requires and always get the most competitive long distance and international rates on the market.

ACCOMMODATES ANY SITUATION

With on-demand bursting, our system temporarily increases call capacity to accommodate any situation despite spikes in volume.

FULLY REDUNDANT

MetTel's six geographically redundant data centers across North America assure uptime even in natural disasters or other location-based outages.

INCREASED EFFICIENCY

Integrate both voice and data onto a single network, prioritize business traffic, and have free on-net calling between all business locations.
