6. Custom Calling Services

Custom Calling Features are offered subject to availability from the underlying carrier:

## A. Call Forwarding

Call Forwarding allows for the automatic forwarding (transfer) of all incoming calls to another telephone number. The line can be restored to normal operation at any time.

Busy Call Forwarding allows the forwarding of incoming calls when the line is busy. The forwarded number is fixed by the service order.

Delayed Call Forwarding allows the forwarding of incoming calls when the line remains unanswered after a present number of rings. The number of rings and the forwarded number are fixed by the service order.

Select Call Forwarding allows the automatic forwarding (transfer) of calls from up to ten preselected numbers to another telephone number. The line can be restored to normal operation at any time.

Remote Access Call Forwarding allows the activation and deactivation of the Call Forwarding feature and changes to the forwarded number to number from a location other than where the service is located.

## B. Call Waiting

Call Waiting sends a tone signal while a call is in progress to indicate a second call is waiting; and by operation of the switchhook, to place the first call on hold and answer the waiting call. Operation of the switchhook permits passage back and forth between the two calls, but a three-way call cannot be established.

Cancel Call Waiting allows the dialing of an activation code prior to making a call, to cancel the Call Waiting feature. Cancel Call Waiting must be activated each time Call Waiting is canceled.

## C. Three-Way Calling

Three-Way Calling allows the addition of a third party to an established connection. When the third party answers, a two-way conversation can be held before adding the original party for a three-way conference. The initiator of the conference controls the call and may disconnect the third party to reestablish the original connection or establish a connection to a different third party. This feature may be used on both incoming and outgoing calls.

## D. Priority Ringing

Priority Ringing differentiates incoming calls from up to ten preselected telephone numbers by signaling with a distinctive ringing pattern.

## E. Repeat Dialing

Repeat Dialing allows calls to be automatically redialed when the first attempt reaches a busy number. The line is checked every 45 seconds for up to 30 minutes and alerts the originating telephone line with a distinctive ringing pattern when the busy number and the originating line are free.

## F. Call Screening

Call Screening allows the automatic blocking of incoming calls from up to ten preselected telephone numbers. The list of number can be changed at any time. Callers whose numbers have been blocked will hear a recorded message and no usage charges will apply.

G. Call Return

Call Return allows the return of a call to the last incoming call whether answered or not. Upon activation, it will redial the number automatically and continue to check the number every 45 seconds for up to 30 minutes if the number is busy. A distinctive ringing pattern signals when the busy number is free. When answered, the call is then completed. The calling party's number is not delivered or announced to the call recipient.

E. MetPath™ ISDN BRI Service <sup>[1]</sup>

MetPath™ ISDN BRI (Basic Rate Interface) uses standard “twisted pair” cables and is nearly three times faster than a 56K dial up line. MetPath ISDN PRI (Primary Rate Interface) uses a 1.544 Mbps digital transport facility (T1). Both services provide the superior clarity of digital transmission, a high-speed data interface and sufficient bandwidth capacity to fulfill your current and future communication needs.

ISDN BRI consists of two 64 Kbps B (Bearer) channels and one 16 Kbps D (Data) channel. Each B channel has the ability to integrate voice, data, image and video. The B channels may be kept separate or bonded together to deliver 128 Kbps.
