

Connected Laptop as a Service (CLaaS)

Simple, secure, connected computing solutions for modern business

Remote Work Increases Device Management Complexity and Data Security Risk

The rapid expansion of endpoint devices is placing increasing demands on IT and procurement departments. Purchasing new laptop devices, provisioning, maintaining compliance, and kitting and shipping devices for a disparate workforce is a significant drain on resources. Additionally, keeping remote workers connected while maintaining network security is a major concern for enterprise businesses, as connecting through public Wi-Fi increases exposure and risks of cyber threats.

Free your IT teams from the burden of laptop management

Complete Device Lifecycle Management

From ordering to dispatch, configuration to upgrades, device breaks, and everything in-between MetTel has you covered with 24/7/365 support and same-day device replacement.

Unparalleled ROI

MetTel CLaaS delivers scalable connectivity with no CAPEX or inventory burden, freeing IT teams to focus on what matters while saving hundreds to thousands of IT staff hours each year.

Best in Class Tech

MetTel has partnered with leading technology brands to offer a comprehensive portfolio of the latest AI-powered hardware, enabling secure, scalable solutions for a wide range of corporate use cases.

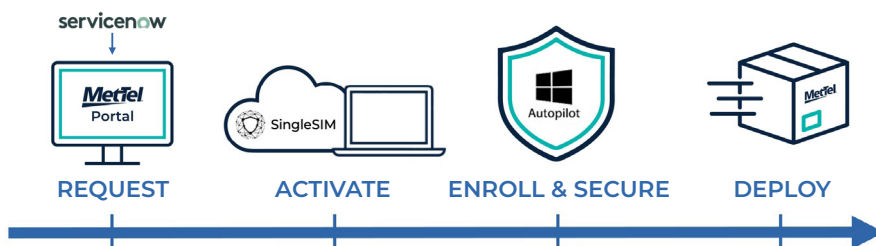

Secure Connectivity from Anywhere

MetTel SingleSIM allows your field-based and remote teams to have always-on, seamless connectivity from anywhere without the risks of unsecure public Wi-Fi.

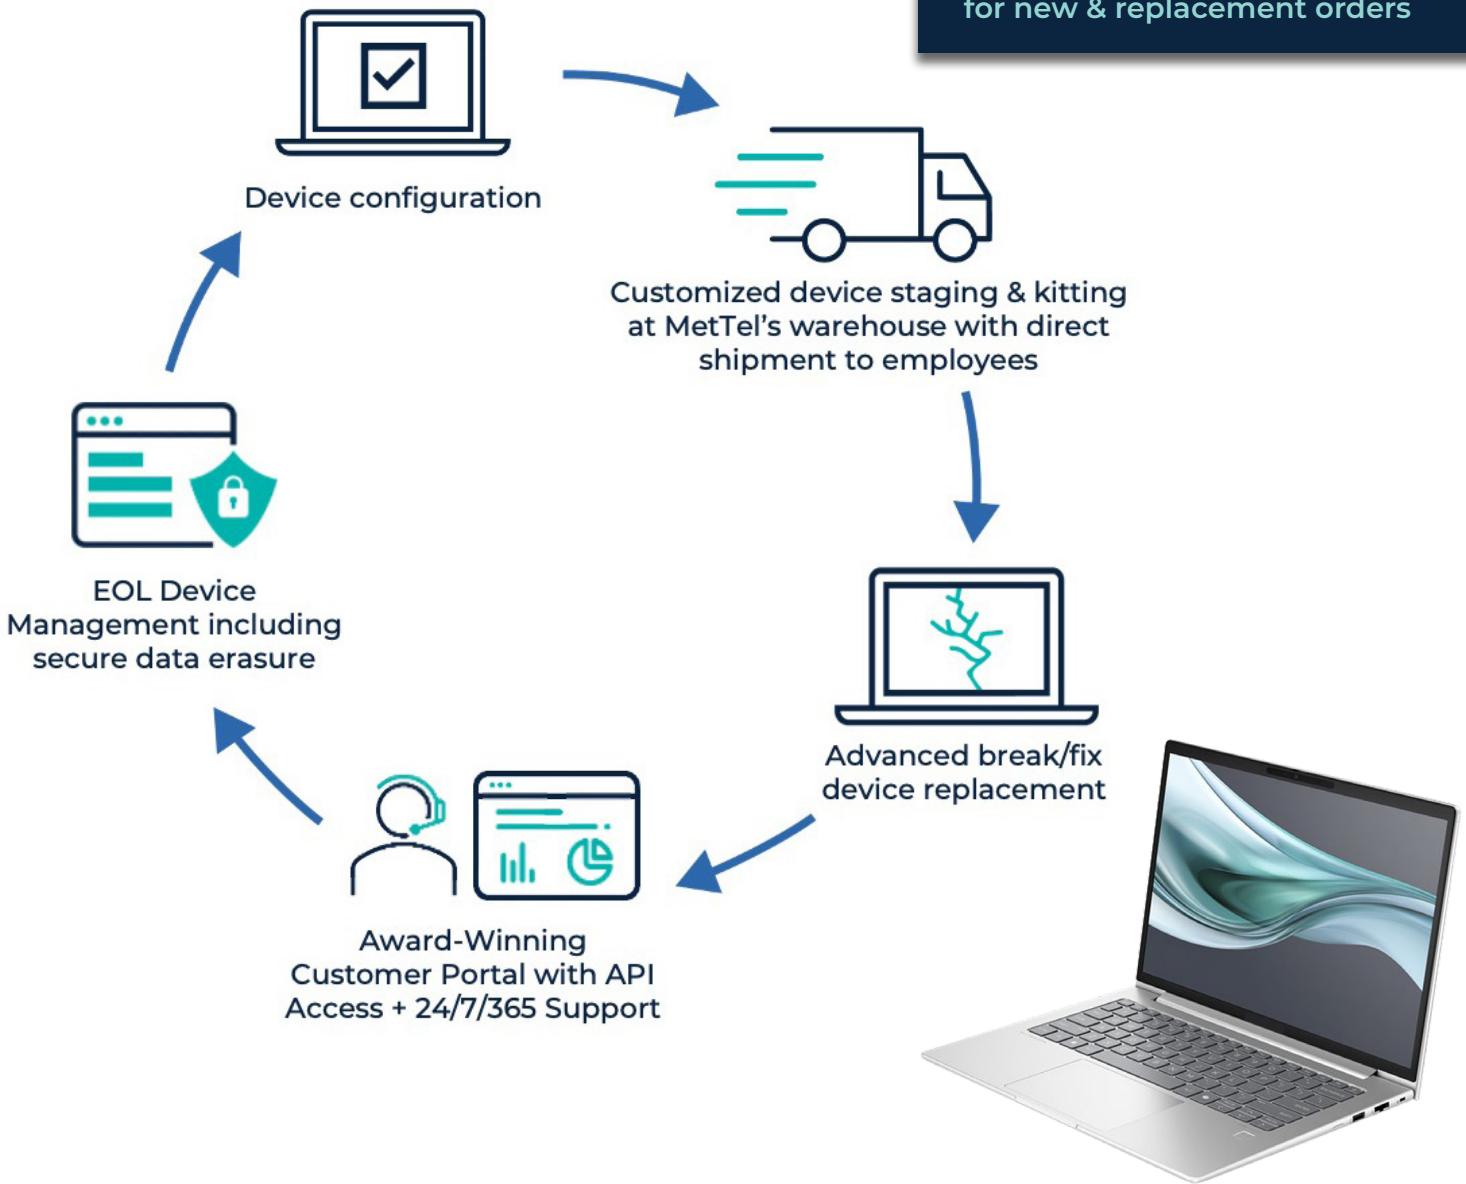

You place an order. We handle the rest.

The MetTel orchestrator seamlessly syncs to commonly used enterprise software platforms like ServiceNow and Workday.

Complete Lifecycle Management

Same Day Shipping
for new & replacement orders
